

- Unbelievable yield punch for maturity
- Very well adapted
- Great stalks and quick drydown
- Works best in corn-soybean rotations
- Makes a top-notch silage

An adaptable, top producer across the Northern Corn Belt. A tall plant with a softer kernel texture makes for very good silage characteristics. A must have variety that will yield with any 90-95 day hybrid. Top yields make this an excellent choice to move south to add to harvest windows.
